LIBRARIES & READING ROOMS.

BAILLIE'S INSTITUTION

Was founded by Mr. George Baillie, writer in Glasgow, who divested himself in his lifetime of his whole fortune (£18,000), which with its accumulations during twenty-one years from 11th November, 1863, he appointed to be applied to the erection & endowment of an institution in Glasgow, to be called "Baillie's Institution," having for its object (1st) to aid the self-culture of the operative classes by means of free public libraries; & (2nd) the instruction of their children in unsectarian schools. The

former of these, however, is alone to be proceeded with, unless there is a sufficiency of funds for both. The institution was incorporated by royal charter, March 18, 1867. A free library was opened at 48 Miller street on September 29, 1887

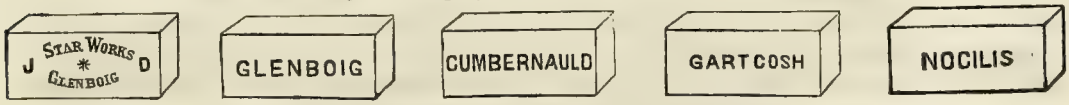
The Glenboig Company are the Sole Makers of the "GLENBOIG" and "STAR GLENBOIG" brands, which stand first among Fire Bricks, for the construction of all kinds of furnaces subjected to the highest heats and most sudden changes of temperature.

The use of these Bricks is found to be economical in districts of England where Fire Bricks are made and sold at half the price of the "Glenboig" brand; but how much more economical must they be when shipped abroad and where both qualities bear the same charge for carriage?

The "GARTCOSH" and "CUMBERNAULD" brands are sold cheaper. The Company purchased these works for the purpose of meeting the demands of buyers who require a cheaper Fire Brick of good quality, and they offer them with confidence, knowing that they are unsurpassed by any other Fire Brick made in Scotland, excepting "Glenboig" alone.

All articles manufactured by the Company bear one or other of the undernoted Trade Marks—



Purchasers are recommended to see to it that the brand purchased is really stamped on the goods.

GAS RETORTS.—The great number of Glenboig Retorts now in use in the principal Gas Works at Home and Abroad is the best evidence of the high estimation in which this brand is held by Gas Engineers, who know the importance of using "Retorts that can be depended upon."

SEWAGE PIPES, TRAPS, &c.—The Company are also manufacturers of Glazed Fire Clay Pipes, and all descriptions of Junctions, Traps, &c. Makers of the "Waverley" Combination Traps and Inspection Chambers, acknowledged to be the best Traps yet before the Public; a sure preventive against Sewer Gases entering the house.

For upwards of half a century the Garnkirk Fire Clay has been known throughout the world, and the supply of it is still inexhaustible. This Clay differs from that which other Scotch Fire Clay wares are made, in being comparatively free from iron, the presence of which in quantity is not only dangerous, but wasteful, as owing to its power as a conductor, it causes great radiation of heat.

The Garnkirk Fire Clay differs from these other Scotch Clays also in the extra cost of its manufacture, requiring, as it does for burning, a degree of heat which changes these clays into a black vitreous mass.

The Garnkirk Company have been favoured with the results of a series of comparative trials which had been made by large English consumers, in which the best brands of Fire Bricks of the United Kingdom were tested against the Garnkirk Bricks. In each and all of these trials the Garnkirk Brick proved most refractory, and even the highly-prized Stourbridge Bricks yielded in each trial to the force of heat applied with five times the rapidity of the Garnkirk Bricks.

The Garnkirk Fire Clay Company manufacture specially for Glass Works where the clay is required to withstand the action of molten glass, and also for other works where the combining power of alkalies has to be withstood.

☞ *The GARNKIRK BRICKS are specially and by preference specified by Mr. Siemens for his Regenerative Gas Furnaces.*

Prices, &c., on Application.

THE FOLLOWING ARE DETAILS OF ANALYSIS:—

LANEMARK CANNEL COAL.

Gas per ton of Coal	10,833 cub. ft.
Illuminating power of Gas in Standard Candles	28 40 candles.
Coke per ton of Coal	1,306.66 lbs.
Carbon in Coke	88.58 per cent.
Ash in Coke	10 80 per cent.

LANEMARK COKING GAS COAL.

Gas per ton of Coal	10,333 cub ft.
Illuminating power of Gas in Standard Candles	18.29 candles.
Coke per ton of Coal	1,340.20 lbs.
Carbon in Coke	95,43 per cent.
Ash in Coke	3.39 per cent.

REMARKS.

This is a first-class Coking Coal. It yields on a practical scale a large volume of Gas of good quality, together with **12 Cwts. of Coke that can hardly be surpassed in quality.** The percentage of Water in the Coal and the amount of Sulphur in the Gas are both about the average.

In obtaining these results, two tons of the Coal were distilled—without an exhauster—in three successive charges in two sets of three clay retorts each, and the Gas was collected for examination in a separate holder.

It was the pioneer in successful evening journalism in the North of Scotland, and it still holds the premier position in point of circulation and influence amongst evening newspapers North of the Forth.

THE WEEKLY JOURNAL

is the oldest paper in Scotland, and is to be found in the homes of all the County families in the North-east of Scotland, and is also largely sent to friends abroad.

SWANBANK MILL, HOLMFIRTH.

BROOK STREET FACTORY.

REMEMBER THIS FACT!

All Hearthrugs made by me have a small red selvedge up back each side of the Rugs, so if you want John Beever's Cloth Rugs, and no other, you had better look before you buy, to see if the small red selvedge is there; if not, then you know the Rugs offered you are not John Beever's. The best way to get them, if the wholesale firm you do with does not keep my Rugs, is to write me direct for prices and samples. Don't be put off with Rugs largely made of old rags mixed with new. Look for the small red selvedge up each side of the Rug; if you cannot find it, write at once to John Beever for prices and samples.

CRUCIBLE CAST STEEL SPINDLES & FLYERS

Of Every Description for Roving & Spinning Jute, Flax, Cotton, Silk, & Worsted.

Saml. Lucas's Patent Spindle.

The great improvement in this Spindle is a collar hardened and fixed under the screw, where shaded black on the sketch shown, which can be replaced; and spindle worked down at the shoulder can have this patent collar put on at a small cost. The advantage of this collar is to prevent the shoulder at the bottom of screw becoming untrue, by the flyer coming down on shoulder when working, the collar being equal in temper to the flyer, which at present is not the case.

*Excerpt from paper by Captain George S. MacIlwaine, R.N., read at the Royal United Service Institution. Admiral Sir Nowell Salmon, V.C., K.C.B., in the chair.—"Unfortunately I live in hotels a great deal and practically in all the hotels that I have seen, you find Tobin's pipes to this present day. With regard to my condemnation of the ventilation of hotels and buildings generally, I may say I except one house, that is, the hotel in Aberdeen where there has been anything like a good system of ventilation. They have an underground place in which they scrub, clean, and warm the air, and force it into the house through apertures in the walls by Blackman's fans. Anything more delicious than the air which comes into the house you can scarcely imagine * * * it is very pleasant to sleep in the house. You do not have to open your windows. There is a little trap over the door, and you get this delicious clean warm air into your room at once."*
